- Boom Gates, Car Park Systems, Automatic Bollards, Roller Shutters, Turnstiles
- Lighting repairs, installations, energy efficient upgrades, Timers and Control Systems
- Emergency and Exit Lighting Testing, Reports and Repairs
- Access Systems, Swipe Cards, Keypads, RFID
- Power Supplies and Distribution Systems, UPS's, Switchboards, RCD's and Circuit Breakers

## Point of Difference

The hardest part of running a field based contracting service is maintaining reliable and consistent communication between the office and the tradespeople on site. By working side by side with our strata and property management clients, we have developed a boutique property service, which offers a level of service and communication that is second to none. With the use of our cloud based field software, we have removed the distance between the Strata Managers office and the Tradesperson on site.

We provide regular email notifications and updates at every stage of the job, and even offer a customer portal, which allows you to check at anytime how a job is progressing. Following an initial site services audit of any new property in our portfolio, we create a site file, which includes all available information about the site and the equipment installed there. This file is then available to both our service co-Service Co-ordinator Shaeneale Holper for each of our properties, ensuring they are familiar with its layout and location of services. This allows us to operate more efficiently and saves the property owners money.
